

■ Description

With white baking finished shell, this professional centralized power supply is designed with battery charger and space to hold it inside. It is mainly applied to HD Camera, DVR, Access Control Lock and other devices which requiring stabilized voltage 12VDC and backup battery. External patented LED indicators to show the working condition of each output. If total power is over 120W, with built-in PFC (Power Factor Correction) to improve efficiency. This series provide a professional, safe and easy installation, no interference and high efficiency power system.

■ Application

- Analog Camera & DVR.
- Access control lock and alarm system.
- Landscape light strip.

■ Features

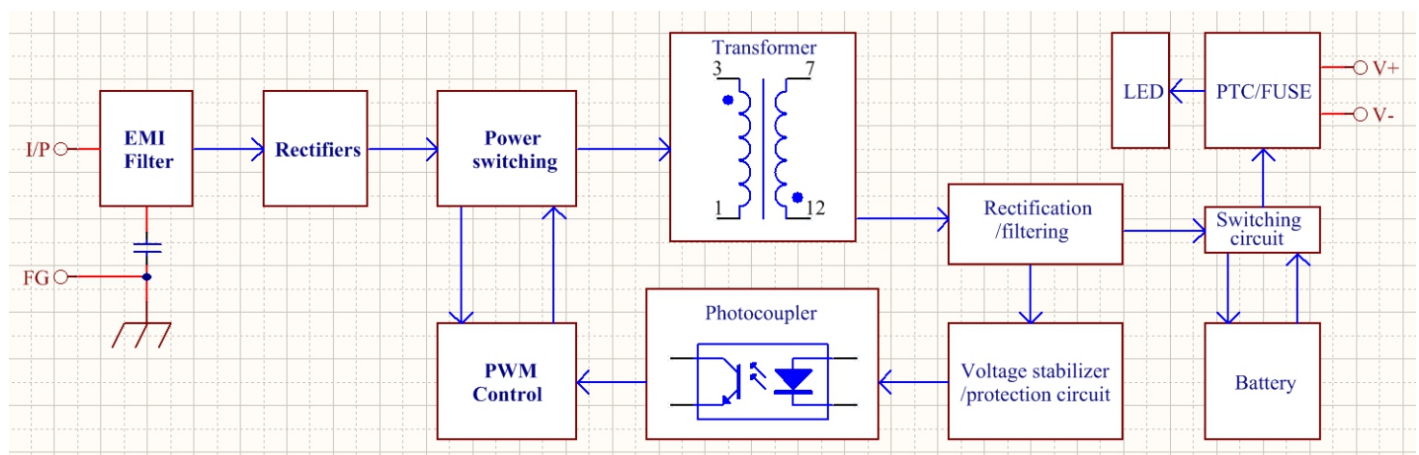

- Full AC input range: 100~240V.
- Withstand 300VAC surge input for 5 seconds.
- Protection: short circuit / overload / over voltage / over temperature.
- Forced air cooling by built in DC fan when the current exceeds 12A.
- Built-in cooling fan controlled by thermal-switch.
- Well finished thick shell, the cable outlets are multi-functional and multi-directional, which is easy for installation depends on real situation and perfectly matched with the wall.
- Withstand 5G vibration test.
- Multiple DC outputs, and each channel has over current (PTC/Tube fuse) and surge protection.
- LED indicators show working condition of each channel and indicator for total output power on.
- With battery charger to connect backup battery and space to hold it inside(1pc 7Ah ~20Ah battery).
- 100% full burn-in test: full load burn-in test at low voltage AC110V, no-load burn-in test at high voltage AC240V and repeated switch of AC power at high voltage AC240V.
- High operating temperature is up to 70°C.
- Operating altitude is up to 5000 meters (note 8).
- High efficiency, long service life, high reliability.

NOTES	<ol style="list-style-type: none"> 1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. 3. Tolerance: includes set up tolerance, line regulation and load regulation. 4. Line regulation is measured from low line to high line at rated load. 5. Load regulation is measured from 0% to 100% rated load. 6. Length of set up time is measured at cold first start. Turning ON/OFF the power supply very quickly may lead to increase of the set up time. 7. Integrated power supply system, when there is one channel over current, the PTC goes shortcut or glass fuse blow, this does not affect other channels. when over current fault is removed, PTC resumes automatically or replace broken glass fuse by hand, and this channel recovered to normal working state. When the peak load of the unit reaches 150% and delivers for over 1 second, it enters hiccup mode and recovers once rated current lower than 150%. 8. The ambient temperature derating of 5°C/1000m is needed for operating altitude greater than 2000m(6500ft). 9. For the backup battery is charged by DC output voltage, so the DC voltage need to be adjusted within 13.8-15V to full charge the battery
